

THE ROUND TABLE

Three Ways to Help Simplify Your Finances

Over time, finances tend to get complicated, especially when you're juggling multiple goals and accounts. Simplifying your finances requires a bit of effort up front, but making just a few changes may help free up more time to focus on your financial priorities.

Make Saving Automatic

Saving for a goal is simpler when money is set aside automatically. For example, you may be able to regularly and automatically deposit a portion of your paycheck into a retirement account through your employer. Your contribution level may also increase automatically each year, if your plan offers this feature. Employers may also allow you to split your direct deposit into multiple accounts, enabling you to build up a college fund or an emergency fund, or direct money to an investment account.

Another way to make saving for multiple goals easier is to set up recurring transfers between your savings, checking, or other financial accounts. You decide on the frequency and timing of those transfers, and you can quickly make necessary adjustments.

Consolidate Retirement Funds

If you've had a few jobs, you might have several retirement accounts, such as IRAs and 401(k) or 403(b) plans, with current and past employers. Consolidating them in one place may help make it easier to monitor and manage your retirement savings and distributions, and prevent you (or your beneficiaries) from forgetting about older or lower-balance accounts. Not all accounts can be combined, and there may be tax consequences, so discuss your options with your financial and/or tax professionals.

Take a Credit Card Inventory

Credit cards are convenient, but managing multiple credit-card accounts can be time-consuming and costly. Losing track of balances and due dates may lead to increased interest charges or late payments. You could also miss out on some of the rewards and benefits your cards offer. If you've accumulated a few credit cards, review interest rates, terms, credit limits, and benefits that may have changed since you got the cards. Ordering a copy of your credit report can help you quickly see all of your open credit-card accounts — there may be some you've forgotten about. Visit annualcreditreport.com to get a free credit report from each of the three major credit reporting agencies (Experian, Equifax, and TransUnion).

Once you know what you have, you can decide which cards to use and put the rest aside. Because it's possible that your credit score might take a temporary hit, it may not always be a good idea to close accounts you're not using unless you have a compelling reason, such as a high annual fee or exposure to fraud.

Donor-Advised Funds Combine Charitable Impact with Tax Benefits

A donor-advised fund (DAF) is a charitable account offered by sponsors such as financial institutions, community foundations, universities, and fraternal or religious organizations. Donors who itemize deductions on their federal income tax returns can write off DAF contributions in the year they are made, then gift funds later to the charities they want to support. DAF contributions are irrevocable, which means the donor gives the sponsor legal control while retaining advisory privileges with respect to the distribution of funds and the investment of assets.

Donors can take their time vetting unfamiliar charities and exploring philanthropic opportunities. They can wait to take advantage of matching fund campaigns, have money ready to aid victims when disaster strikes, or build up funds over multiple years to make one large grant for a special purpose. Grants can generally be made to any qualified tax-exempt charitable organization in good standing.

Under current law, there are no rules about how quickly money in DAFs should be granted. However, legislation has been introduced — the Accelerating Charitable Efforts (ACE) Act — that would impose a 15-year limit on the donor's advisory privileges, among other changes. You may want to watch for future developments if you are interested in using donor-advised funds to execute a charitable giving strategy. (Any legislation passed in 2022 likely would not take effect until 2023.)

Tax-Efficient Timing

Gifts to public charities, including donor-advised funds, are tax deductible up to 60% of adjusted gross income (AGI) for cash contributions and 30% of AGI for non-cash assets (if held for more than one year). Contribution amounts that exceed these limits may be carried over for up to five tax years.

DAF contributions can be timed to make the most of the tax deduction. In an especially high-income year, for example, a larger contribution might keep a taxpayer from climbing into a higher tax bracket or crossing a threshold that would trigger Medicare surcharges or the net investment income tax.

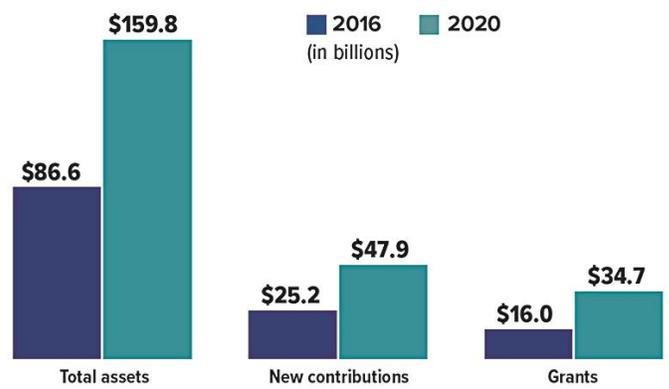

Now that the standard deduction has been expanded (\$12,950 for single filers and \$25,900 for joint filers in 2022), many taxpayers don't benefit from itemizing deductions, including those for charitable donations. But with advance planning, it may be possible to bunch charitable contributions that would normally be donated

over several years in a single tax year, ensuring that itemized deductions surpass the standard deduction.

A similar approach may appeal to pre-retirees in their peak earning years. Those who expect to be in a lower tax bracket and/or might claim the standard deduction during retirement might consider making deductible contributions to a donor-advised fund while they are still working.

Growth in Donor-Advised Funds

Contributions to DAFs accounted for about 10.1% of total U.S. charitable giving in 2020.

Gifting Appreciated Assets

Contributions to a donor-advised fund can be made with cash, publicly traded securities, and more complicated assets such as real estate, valuable art and collectibles, or a stake in a privately held business, offering a convenient way to gift appreciated assets. Fund sponsors typically have experience in evaluating and liquidating donated assets (a qualified appraisal may be needed). This way, a donor can make a single contribution to a DAF that eventually benefits multiple charities, including smaller organizations that are not able to accept direct donations of appreciated assets.

Giving appreciated assets to charity can provide lucrative tax savings. A donor may qualify for a tax deduction based on the current fair market value of the contribution while helping reduce capital gain taxes on the profits from the sale of those assets. This strategy may be helpful when family businesses or shares of privately held companies are sold, or any time a larger tax deduction is needed.

DAFs have fees and expenses that donors giving directly to a charity would not face. All investing involves risk, including the possible loss of principal, and there is no guarantee that any investment strategy will be successful.

Debt Optimization Strategies

To help improve your financial situation, you might consider reducing your debt. Before starting any debt payoff strategy (or combination of strategies), be sure you understand the terms of your debts, including interest rates, payment requirements, and any prepayment or other penalties.

Start with Understanding Minimum Payments

You are generally required to make minimum payments on your debt, based on factors set by the lender. Failure to make the minimum payments can result in penalties, higher interest rates, and default. If you make only the minimum payments, it may take a long time to pay off the debt, and you will have to pay more interest over the life of the loan. This is especially true of credit-card debt.

Your credit-card statement will indicate your current monthly minimum payment. To find the factors used in calculating the minimum payment amount each month, you can review terms in your credit-card contract, which can change over time.

The minimum payment for credit cards is usually equal to the greater of a minimum percentage multiplied by the card's balance (plus interest on the balance, in some cases) or a base minimum amount (such as \$15). For example, assume you have a credit card with a current balance of \$2,000, an interest rate of 18%, a minimum percentage of 2% plus interest, and a base minimum amount of \$15. The initial minimum payment required would be \$70 [greater of $(\$2,000 \times 2\%) + (\$2,000 \times (18\% \div 12))$ or \$15]. If you made only the minimum payments (as recalculated each month), it would take 114 months (almost 10 years) to pay off the debt, and you would pay total interest of \$1,314. For consumer loans, the minimum payment is generally the same as the regular monthly payment.

Make Additional Payments

Making payments in addition to your regular or minimum payments can reduce the time it takes to pay off your debt and the total interest paid. Additional payments could be made periodically, such as monthly, quarterly, or annually.

Using the previous example (\$70 initial minimum payment), if you made monthly payments of \$100 on the credit card debt, it would take only 24 months to pay off the debt, and total interest would be just \$396.

Here's another example. Assume you have a current mortgage balance of \$300,000. The interest rate is 5%, the monthly payment is \$2,372, and the remaining term is 15 years. If you make regular payments, you will pay total interest of \$127,029. However, if you pay an additional \$400 each month, it will take only 12 years and one month to pay off the mortgage, and you will pay total interest of just \$99,675.

Pay Off Highest Interest-Rate Debt First

One way to potentially optimize payment of your debt is to first make the minimum payments required for each debt and then allocate any remaining dollars to debt with the highest interest rates.

For example, assume you have two debts, you owe \$10,000 on each, and each has a monthly payment of \$200. The interest rate for one debt is 8%; the interest rate for the other is 18%. If you make regular payments of \$400, it will take 94 months until both debts are paid off, and you will pay total interest of \$10,827. However, if you make monthly payments of \$600, with the extra \$200 paying off the debt with an 18% interest rate first, it will take only 41 months to pay off the debts, and total interest will be just \$4,457.

Use a Debt-Consolidation Loan

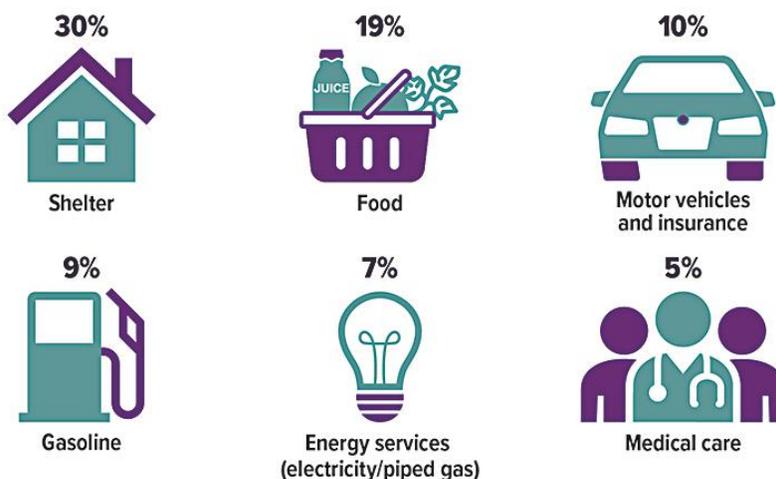

If you have multiple debts with high interest rates, it may be possible to pay them off with a debt-consolidation loan. Typically, this will be a home-equity loan with a lower interest rate than the rates on the debts being consolidated. (Note that a federal income tax deduction is not currently allowed for interest on home-equity indebtedness unless it is used to substantially improve your home.) Keep in mind that a home equity-loan potentially puts your home at risk because it serves as collateral, and the lender could foreclose if you fail to repay. There also may be closing costs and other charges associated with the loan.

All examples are hypothetical and used for illustrative purposes only and do not represent any specific investments or products. Fixed interest rates and payment terms are shown, but actual interest rates and payment terms may change over time. Actual results will vary.

The Top Six Inflation Drivers of 2022

In June 2022, the 12-month rise in the Consumer Price Index (CPI) peaked at 9.1%, the fastest pace in 40 years, before dropping to 7.7% in October. This bout of inflation has been driven in large part by steep price hikes for essentials, hitting many U.S. households where it hurts the most. In fact, more than three-fourths of the annual increase in the CPI can be attributed to these six categories.
